Process way: Flat/print/2D/3D
Normal size: 25-70mm
Thickness: 4mm
With soft magnet on backing
No moq

Bottle opener
Process way: Flat/print/2D/3D
Normal size: 60-70mm
Thickness: 8mm
With bottle opener on backing
No moq

Coaster
Process way: Flat/print/2D
Normal size: 90mm dia/square
Thickness: 4mm
Without attachment
No moq

Velcro patch
Process way: Flat/print/2D/3D
Normal size: 60-90mm
Thickness: 2.5mm-4mm
With velcro on backing
No moq

Rubber badge
Process way: Flat/print/2D/3D
Normal size: 25-50mm
Thickness: 4-6mm
With B/C or safety pin on backing
No moq

METAL ALUMINIUM BOTTLE OPENER

Polyester

The most common and economic lanyards are made of polyester and there are many choices of individualization. We can do them in any width from 8 to 30 mm, flat or tube, either with printed or woven logos and dyed to Pantone chart. We have some standard color in stock then can finish quickly.

Nylon:

Compared to the standard polyester lanyard the nylon lanyard with its shiny surface looks more elegant. The price of nylon is slightly higher, but you get a lanyard which is much more exclusive than a normal lanyard.

Logos will be added by screen printing.

Satin:

Lanyards made of satin material are soft and smooth and available in a width of 10-25 mm. They are usable as an elastic mobile phone holder or the smallest version as a holder for glasses. The basic material is white and the all-over printing usually takes place by sublimation printing. However, you can also use the method of screen printing.

PVC:

Pvc material used less in lanyard, it is clear and can with 1c logo printed. It is more hard than normal cloth lanyard.

Neoprene:

Neoprene lanyards are soft, elastic and nevertheless resistant. The size can be chosen between 15, 20 and 25 mm. The borders are carefully sewed. Logos can be added by screen printing or sublimation printing.

Enco-friendly PET

eco-friendly lanyards is based on plant fibre such as bamboo. Bamboo fibres are extracted from the bamboo plant which is one of the fastest growing plants on earth. The lanyards feel soft on the skin and are biodegradable. Whether in natural colour or dyed to Pantone chart, Lanyards made from recycled PET material are also available. They are a great alternative and save natural resources.

Size:

CMYK Printing

We use the CMYK printing method for printing logos with colour gradient on polyester lanyards or adding another photo onto a lanyard with screen printing.

Screen Printing

Our advanced method of screen printing allows to print logos with filigree details in a quality never seen before. We can print Pantone colours, gold and silver or even colour which glows in the dark. This is a well-priced way of printing motifs onto lanyards in every size and material.

Woven Lanyards

Using this method, simple logos and text can be woven directly into the lanyard. We are able to produce either one coloured lanyards, where the logo is visible on the backside as a negative or multi-coloured lanyards, where the lanyard will have an additional woven layer to achieve a consistent backside. We recommend a minimum width of 20 mm for woven lanyards.

Sublimation Printing

Thanks to highly sophisticated transfer technology smallest details, colour gradients and the reproduction of photos in brilliant colours can be provided in incomparable quality. It is mainly used on satin lanyards, but also achieves good results on polyester.

Process way & Apply advertisement

lanyards

Embossed printing/3D printing

3D printing stands out clearly from the polyester ribbon. So your ad is not only visible but palpable, too. Especially in high-contrast scene effect attracts attention. The surface of the printing can be designed than one color. We can also use this printing effect on other materials: felt.

Reflecting strip stitching on polyester

A silver reflecting stripe can be added to a polyester lanyard and if you wish you can print your logo with the screen printing method on top of it. It is also possible to weave reflecting seams into 20 or 25 mm wide lanyards.

Heat transfer printing on flat polyester

Heat transfer printing logo on flat polyester lanyard. This kind of process way is used not most. It is suitable for some full color logo request the flat base lanyard. Different from the silk-screen printing, it just feels smooth.

Reflective material printed directly on flat polyester

The reflective element is a special style material which can be printed directly on the lanyard. It is with a special way of printing. When light on it, then it will be reflective and bling bling.

Lanyard style show

Flat polyester lanyard with screen printing are the most common version. As this is the cheapest technique of lanyard.

Flat polyester with short ribbon part, Logo silk screen printed, metal hook + plastic bulk break + mobile phone strip (L10350)

colour woven flat polyester lanyard, screen printing logo, black colour metal oval hook + plastic buckle + safety break + mobile phone strip (L10410)

Flat polyester lanyard silk screen printing with metal hook fitted (L10310)
